Preface	xv

Part I Introduction

1 Biology of the Cancer Cell <i>Marina Marjanovic and Krishnarao Tangella</i>	3
1.1 Cell—A Basic Unit of Life	3
1.2 Cell Cycle	4
1.3 Control of the Cell Cycle	6
1.4 Biology of a Cancer Cell	7
1.5 Molecular Biology of a Cancer Cell	12
1.6 Summary	13
Suggested Reading	13
2 Review of Electromagnetic Fields <i>Gabriel Popescu</i> ...	15
2.1 Maxwell's Equations	15
2.1.1 Maxwell's Equations in the Space- Time Representation	15
2.1.2 Boundary Conditions	16
2.1.3 Maxwell's Equations in the Space- Frequency Representation (\mathbf{r}, ω)	17
2.1.4 The Helmholtz Equation	18
2.1.5 Maxwell's Equations in the (\mathbf{k}, ω) Representation	19
2.1.6 Phase, Group, and Energy Velocity ...	21
2.1.7 The Fresnel Equations	23
2.1.8 Total Internal Reflection	26
2.1.9 Transmission at the Brewster Angle ...	27
2.2 The Lorentz Model of Light-Matter Interaction	29
2.2.1 From Microscopic to Macroscopic Response	29
2.2.2 Response below the Resonance $\omega \ll \omega_0$	32
2.2.3 Response at the Resonance, $\omega \approx \omega_0$...	32
2.2.4 Response above the Resonance, $\omega \gg \omega_0$	33
2.3 Drude Model of Light-Metals Interaction ...	33
Suggested Reading	35

iv Contents

3	Introduction to Nanophotonics <i>Logan Liu</i>	37
3.1	Overview	37
3.2	Foundation of Nanophotonics	38
3.3	Quantum Confinement in Nanophotonics	39
3.4	Plasmonics	41
3.4.1	Optical Field Enhancement and Concentration	42
3.5	Nanophotonic Characterization with Near-Field Optics	43
3.6	Computation and Simulation in Nanophotonics	44
3.6.1	Mie Scattering Theory	45
3.6.2	Maxwell Equations	46
3.6.3	Finite Element Frequency-Domain Nanophotonic Simulation	49
3.6.4	Finite Difference Time Domain (FDTD)	52
	References	53

Part II Review of Methods

4	Tissue Pathology: A Clinical Perspective <i>Krishnarao Tangella and Marina Marjanovic</i>	57
4.1	Introduction	57
4.2	Tissue Preparation	58
4.2.1	Accessioning the Specimen	58
4.2.2	Grossing in the Specimen	60
4.2.3	Frozen Sections	62
4.2.4	Specimen in Tissue Processor	64
4.2.5	Embedding of Tissue	64
4.2.6	Microtome Sectioning of Paraffin Blocks	66
4.2.7	Tissue Staining	68
4.2.8	Cytology Specimens	71
4.2.9	Special Stains	72
4.3	Pathology Report	74
4.4	Prognostic and Predictive Markers in Pathology	74
4.5	Opportunities for Biophotonics at the Nanoscale	75
4.6	Summary	77
	Acknowledgments	78
	References	78

5	Light Scattering in Inhomogeneous Media	
	<i>Gabriel Popescu</i>	81
5.1	Elastic (Static) Light Scattering	81
5.1.1	Scattering Properties of One Dielectric Particle	81
5.1.2	Rayleigh Particles	83
5.1.3	Mie Theory	85
5.1.4	Single-Scattering Approximation for a Volume Distribution of Dielectric Particles	86
5.2	Quasi-Elastic (Dynamic) Light Scattering ...	88
5.3	Multiple Scattering	90
5.3.1	Elements of Radiative Transport Theory	91
5.3.2	Diffusion Approximation of the Transport Theory	93
5.3.3	Diffusive Wave Spectroscopy	94
	References	96
6	Theory of Second-Harmonic Generation	
	<i>Raghu Ambekar Ramachandra Rao and Kimani C. Toussaint, Jr.</i>	97
6.1	Introduction	97
6.2	Nonlinear Microscopy	98
6.3	Theory of Second-Harmonic Generation (Electromagnetics Picture)	99
6.3.1	Nonlinear Wave Equation	101
6.3.2	Second-Order Nonlinear Polarization	101
6.3.3	Determination of Second-Harmonic Generation Intensity	102
6.3.4	Nonperfect Phase Matching	105
6.3.5	Noncentrosymmetry	105
6.3.6	Quasi-Phase Matching	106
6.3.7	Phase-Matching Bandwidth	106
6.4	Theory on Second-Harmonic Generation (Dipole Picture)	107
6.4.1	Directionality	108
6.4.2	Backward Second-Harmonic Generation	109
6.4.3	Effect of Focusing	110
6.4.4	Phase Matching in Biological Tissues	110
6.5	Experimental Configuration	110
6.6	Practical Considerations	112

6.6.1	Distinguishing SHG	112
6.6.2	Resolution and Penetration Depth	112
6.6.3	Power Limitations	112
6.6.4	Advantages and Disadvantages of SHG	113
6.7	Conclusion	113
	Acknowledgments	114
	References	114

7 Vision Restoration in the Nanobiophotonic Era

<i>S. Sayegh</i>		115
7.1	Introduction	115
7.2	Light at Multiple Levels	116
7.2.1	Ray Optics, Wave Optics, and Quantum Optics	116
7.3	Vision	118
7.3.1	Visual Acuity	118
7.3.2	Definition(s) of Blindness (Legally Blind and Legally Drive)	118
7.3.3	Causes of Blindness: What It Takes to See ... and Not	119
7.3.4	Brief Introduction to the Anatomy of the Eye	120
7.4.	The Size of Things	120
7.4.1	The Eye	120
7.4.2	Cornea	121
7.4.3	Example: Lens	122
7.4.4	Example: Retina	123
7.4.5	Optic Nerve	124
7.5	Failure of Visual Requirements Resulting in Blindness	124
7.5.1	Failure of Transparency	124
7.5.2	Failure of Bending or Focusing	125
7.5.3	Failure of Detection	125
7.5.4	Failure of Conduction	126
7.5.5	Failure of Processing	126
7.6	Diagnostic Tools	126
7.7	Therapeutic Tools	129
7.7.1	Therapeutic Tools (Optical)	129
7.7.2	Therapeutic Tools (Medical)	130
7.7.3	Therapeutic Tools (Surgical)	131
7.8	Summary	137
	Suggested Reading	137

8	Optical Low-Coherence Interferometric Techniques for Applications in Nanomedicine	
	<i>Utkarsh Sharma and Stephen A. Boppart</i>	139
8.1	Introduction	139
8.1.1	Origin and Evolution of OCT Technology	140
8.1.2	Applications in Medicine	141
8.1.3	Applications in Nanomedicine	141
8.2	Basic Theoretical Aspects of Low-Coherence Interferometry	143
8.2.1	OCT Theory	144
8.2.2	Spectral-Domain OCT	146
8.2.3	Axial and Lateral Resolution	147
8.2.4	SNR, Noise, and Sensitivity in OCT Systems	148
8.3	Functional Extensions of OCT and Other LCI-Based Techniques for Applications in Nanomedicine	149
8.3.1	Gold Nanoshells and Nanostructures as Contrast and Therapeutic Agents	150
8.3.2	Spectroscopic OCT	151
8.3.3	Magnetomotive OCT	152
8.3.4	Ultrahigh-Resolution OCT for Subcellular Imaging	154
8.3.5	Phase-Sensitive LCI Techniques for Monitoring Cellular Dynamics	156
8.3.6	Polarization-Sensitive OCT	159
8.3.7	Molecular-Specific LCI-Based Techniques: Pump-Probe OCT and Nonlinear Interferometric Vibrational Imaging	160
8.4	Conclusion	162
	Acknowledgments	163
	References	163
9	Plasmonics and Metamaterials	
	<i>Kin Hung Fung and Nicholas X. Fang</i>	173
9.1	Introduction	173
9.2	Surface Plasmon	178
9.3	Design of Metamaterials	182
9.3.1	Concept of Effective Medium	182
9.3.2	Effective Electric Permittivity (ϵ_{eff})	185
9.3.3	Effective Magnetic Permeability (μ_{eff})	187
9.3.4	Double Negativity	189

9.4 Imaging and Lithography: Breaking the Diffraction Limit	191
9.4.1 Thin-Film Superlens	191
9.4.2 Hyperlens	192
9.5 Outlook	194
9.6 Conclusion	194
References	195

Part III Current Research Areas

10 Infrared Spectroscopic Imaging: An Integrative Approach to Pathology <i>Michael J. Walsh and Rohit Bhargava</i>	201
10.1 Introduction	201
10.1.1 Cancer Pathology	202
10.1.2 Current Practices in Pathology	203
10.1.3 Molecular Pathology	205
10.2 FTIR Spectroscopy	205
10.2.1 Point Spectroscopy and Imaging	205
10.2.2 FTIR and Molecular Pathology	206
10.2.3 Comparison with Other (Spectral) Imaging Techniques	208
10.2.4 Progress in Instrumentation	209
10.3 Applications of FTIR in Biomedical Research	211
10.3.1 2D Cell Culture	211
10.3.2 3D Tissue Culture	212
10.3.3 Clinical Applications of FTIR	214
10.4 Translation of FTIR Imaging into Routine Use in Routine Clinical Pathology	220
10.4.1 Clinical Considerations	220
10.4.2 Spectroscopic Considerations	220
10.4.3 Translation of FTIR Imaging to Clinic	221
10.5 Discussion	221
References	222
11 Scattering, Absorbing, and Modulating Nanoprobes for Coherence Imaging <i>Renu John and Stephen A. Boppart</i>	235
11.1 Introduction	235
11.1.1 Molecular Imaging Techniques	236
11.1.2 Molecular Contrast Agents	237
11.2 Coherence Imaging Probes	242
11.2.1 Scattering Probes	242

11.2.2	Dynamic Probes	244
11.2.3	Absorbing Probes	249
11.2.4	Surface Plasmon Resonant Probes	253
11.3	Conclusions and Future Perspectives	260
	Acknowledgments	261
	References	261
12	Second-Harmonic Generation Imaging of Collagen-Based Systems <i>Monal R. Mehta, Raghu Ambekar Ramachandra Rao, and Kimani C. Toussaint, Jr.</i>	271
12.1	Introduction	271
12.2	Approaches to Obtaining Quantitative Information from Second-Harmonic Generation Images	273
12.2.1	The Ratio of Forward-to-Backward Second-Harmonic Generation Intensity	273
12.2.2	Distribution of Lengths in Structures	273
12.2.3	$\chi^{(2)}$ Tensor Imaging	273
12.2.4	Fourier-Transform Second-Harmonic Generation Microscopy	277
12.3	Quantitative Comparison of Forward and Backward Second-Harmonic Generation Images	281
12.3.1	Preferred Orientation	282
12.3.2	Peaks in Magnitude Spectrum	284
12.4	Conclusion	285
	Acknowledgments	285
	References	285
13	Plasmonics: Toward a New Paradigm for Light Manipulation at the Nanoscale <i>Maxim Sukharev</i>	287
13.1	Introduction	287
13.2	Computational Nano-Optics	291
13.3	Phase-Polarization Control Scheme	296
13.4	Plasmon-Driven Light Trapping and Guidance by 1D Arrays of Nanoparticles	299
13.5	Optics of Metal Nanoparticles with No Center of Inversion Symmetry	302
13.6	Genetic Algorithm Design of Advanced Plasmonic Materials for Nano-Optics	306

X Contents

13.7	Perfect Coupling of Light to Plasmonic Diffraction Gratings	310
13.8	Conclusion	314
	References	315
14	Plasmon Resonance Energy Transfer	
	Nanospectroscopy <i>Logan Liu</i>	319
14.1	Introduction	319
14.2	PRET-Enabled Biomolecular Absorption Spectroscopy	320
14.2.1	PRET Imaging of Nanoplasmonic Particles in Living Cells	326
14.2.2	Whole-Field Plasmon Resonance Imaging	327
14.3	Experimental Procedures	332
14.3.1	Preparation of Cyt c Conjugated Gold Nanoparticles on a Glass Slide	332
14.3.2	Scattering Imaging and Spectroscopy of Single Gold Nanoparticles	332
14.3.3	Finite Element Simulation of Electromagnetic Energy Coupling in PRET	333
14.4	Conclusions	333
	References	334
15	Erythrocyte Nanoscale Flickering: A Marker for Disease <i>Catherine A. Best</i>	337
15.1	Introduction to Hematology	337
15.1.1	Standard Blood Testing	337
15.1.2	RBC Morphology Assay	338
15.1.3	Cell Deformability Assay	343
15.2	Physical Properties of RBC Membranes	343
15.2.1	RBC Membrane Fluctuations	346
15.2.2	Existing Techniques for Measuring RBC Membrane Fluctuations	347
15.2.3	Quantitative Phase Imaging	348
15.3	Nanoscale Characterization of RBC Dynamics	351
15.3.1	Static (Spatial) Behavior of Membrane Displacements	351
15.3.2	Dynamic Behavior of Membrane Displacements: Spatial and Temporal Correlations	353
15.3.3	Effects of Adenosine Triphosphate (ATP)	356

15.3.4	Effects of Osmotic Pressure on Red Blood Cell Mechanics	360
15.4	Clinical Relevance of RBC Membrane Fluctuations: Malaria as the First Example	360
	Acknowledgments	362
	References	363
16	Superresolution Far-Field Fluorescence Microscopy <i>Manuel F. Juetten, Travis J. Gould, and Joerg Bewersdorff</i>	369
16.1	Introduction and Historical Perspective	369
16.2	Fundamentals of Superresolution Microscopy	374
16.2.1	PSF Engineering	374
16.2.2	Localization-Based Microscopy	377
16.2.3	Fluorescent Probes	380
16.2.4	The Optical Transfer Function (OTF)	382
16.3	Applications	388
16.3.1	Multicolor Imaging	388
16.3.2	Temporal Resolution and Live-Cell Imaging	389
16.3.3	Superresolution in the Axial Direction	390
16.4	Discussion	392
	Acknowledgments	397
	References	397
	Index	403
